

Modernize Your Existing Intranet

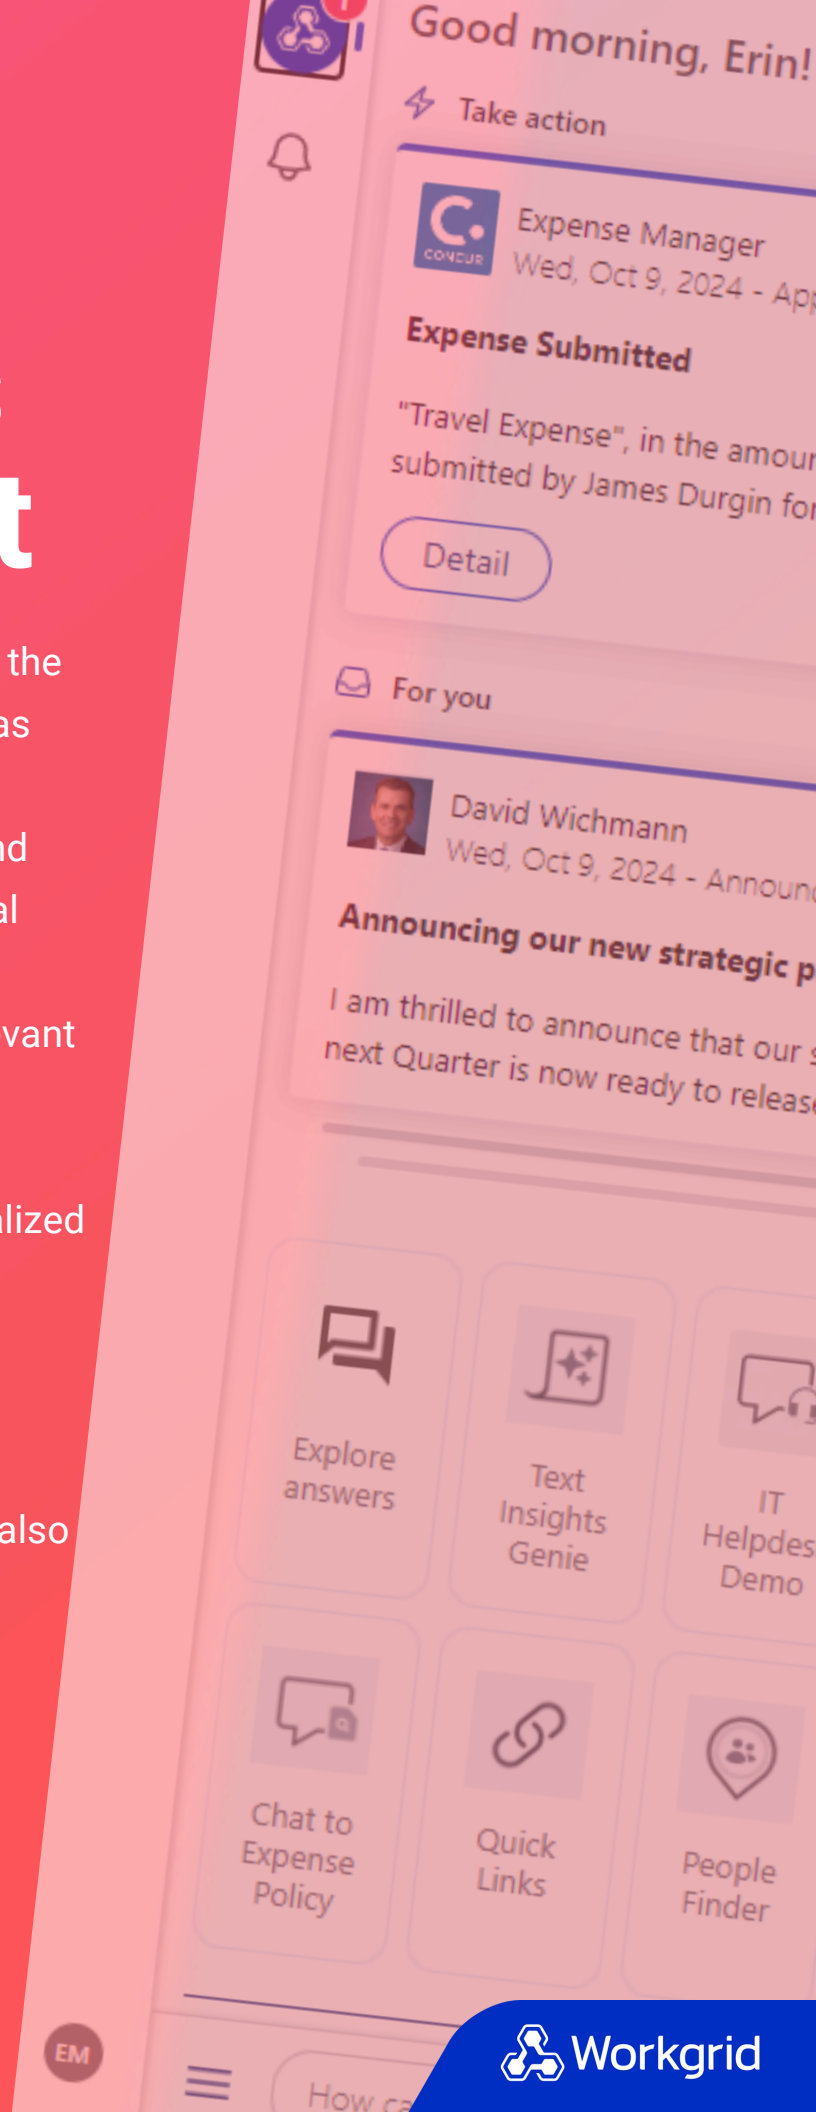

Bring AI to your intranet and deliver a modern experience your employees will love — without replacing your existing intranet platform

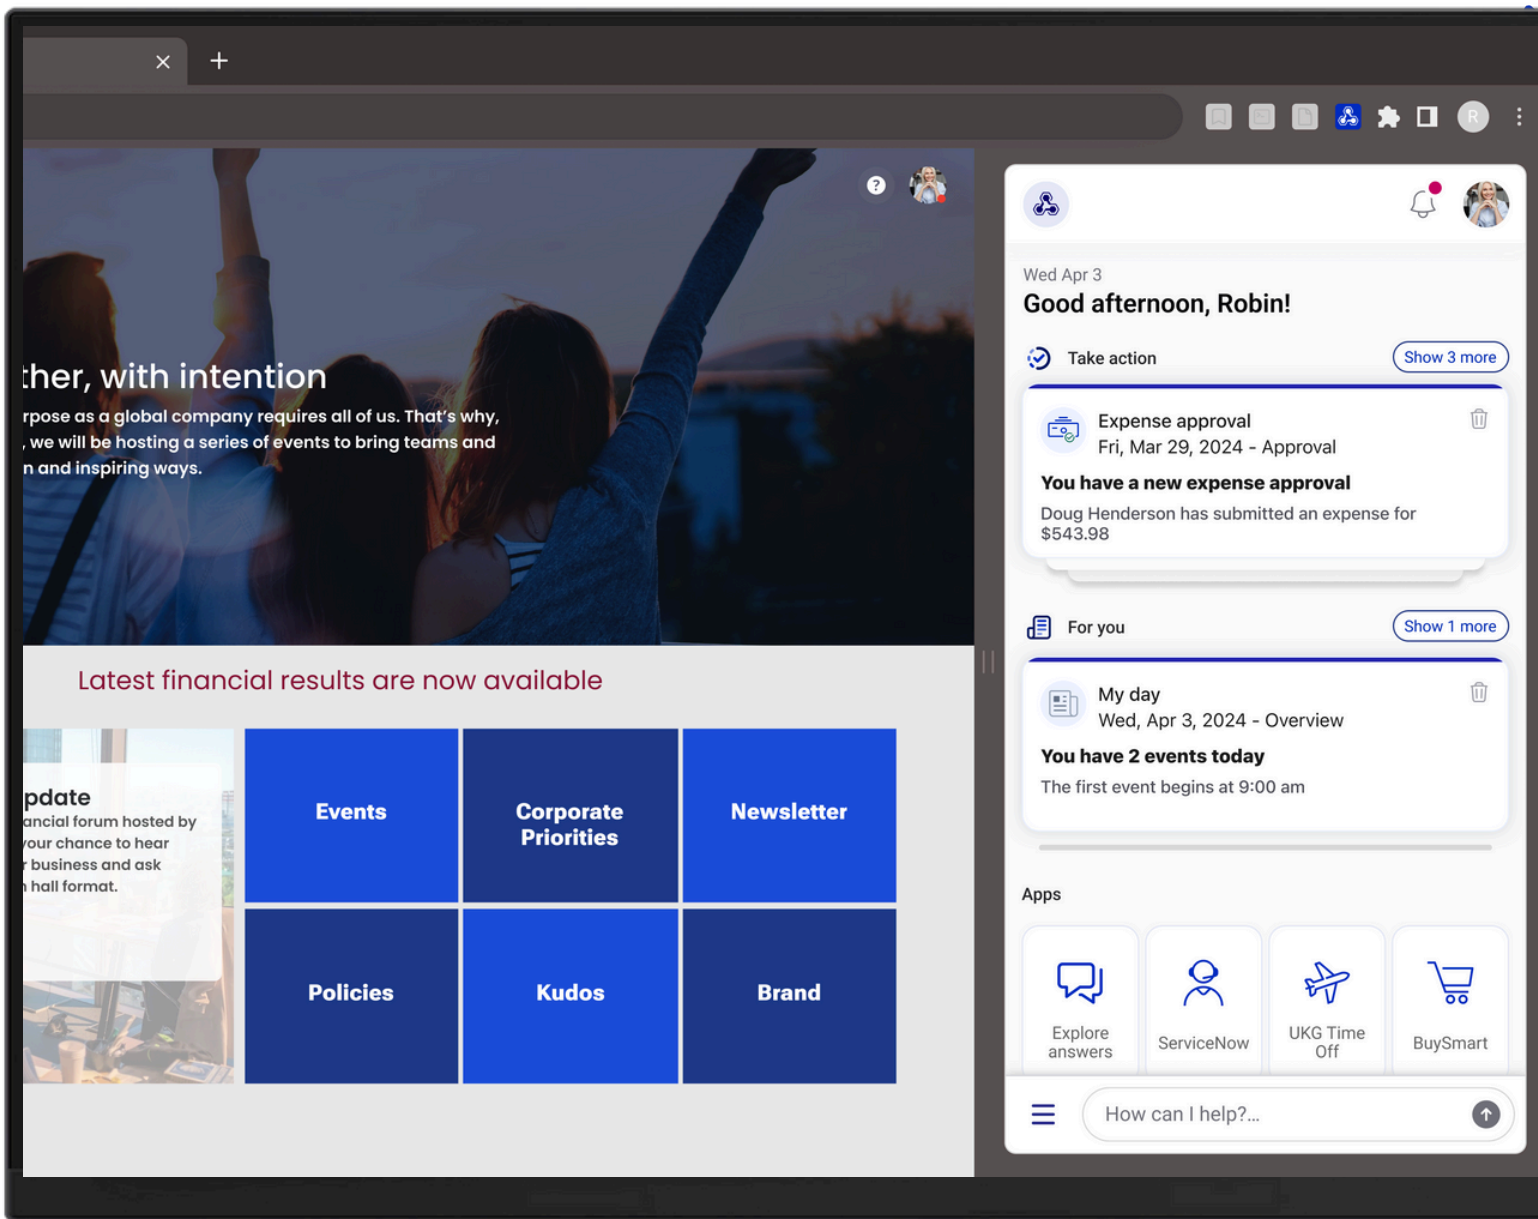

Workgrid transforms the intranet

Workgrid's AI Assistant integrates with the most popular intranet platforms, such as **SharePoint, Unily, Igloo Software, etc.**, bringing together information, tasks, and communications from across the digital workplace to give employees a unified experience that's personalized and relevant — right from the intranet!

With the dynamic AI Assistant, personalized tasks and information from across the organization are presented alongside important employee data, like pay information and time off balances. The addition of a natural language chatbot also makes finding information as easy as asking a question.

With modern functionality like this, employees are sure to spend time on the intranet and visit it often.

Workgrid in action

Personalized and targeted news feed

Workgrid helps employees focus on what's important by giving them just the right information at the right time. Smart notifications make it easy to deliver personalized, contextual news and communications that are tailored to each employee based on criteria like office location, job function, etc.

Unified activity stream

Drive traffic to the intranet with a unified activity stream that enables employees to see exactly what needs their immediate attention. Workgrid's ability to integrate with popular enterprise systems means employees have just one place to go to view and take action on notifications, tasks, and approvals from multiple systems.

Simplified access to enterprise systems

Workgrid integrates with common systems for HR, IT and finance to present targeted functionality and information on the intranet, eliminating the need for employees to log into many disparate systems. Workgrid abstracts only the important information workers need — from time off balance and payroll details to employee handbook policies — presenting it in a conversational user interface that turns the intranet into the ideal front door for your digital workplace.

Help employees find information

Workgrid's AI Assistant enables employees to find the information they need easily using natural language chat, increasing engagement and improving productivity by delivering answers that are contextual to each employee's specific circumstances.

Rather than sorting through pages of search results, the AI Assistant delivers precise answers to employees sourced from information stored within an intranet page, document, or system.

How do I order a new laptop?

Here's what I know about that:

Deliver governed AI experiences

The Workgrid AI Assistant is also an easy way to deliver governed AI functionality to employees. Provide access to AI features like content generation and insight summaries to help employees leverage this powerful technology within your organizations defined constraints.

The benefits of adopting an AI Assistant for the intranet

- ✓ Modern intranet features for a fraction of the cost and time it would take to replace your existing intranet
- ✓ Increased visibility of information with AI-powered search for quicker, more detailed responses to employee questions
- ✓ Higher engagement with the intranet by combining the important tasks and information employees need into a single experience
- ✓ Improved employee satisfaction and increased productivity by providing streamlined access to the tasks and information employees care about
- ✓ Easy to implement governed AI experiences connect employees to information and maximize experiences with existing tech investments
- ✓ Deliver utility to the entire enterprise with an agnostic user experience not tied to one system or department
