# Build apps, integrations, and workflows faster

With Workgrid's no-code development tool, Workshop, organizations can easily build and deliver Workgrid apps that guide employees' attention to exactly what they need to know and do from key business systems.

Build apps that:

- ✓ Reduce digital friction
- ✓ Improve the employee experience
- ✓ Optimize business processes and integrations

⊕ Add Data Source

PAYCHEX

Ⓟ When a pay period ends

Deploy 🚀

Workgrid

How Workshop works

Start from a pre-built template or build an app from scratch. Using the drag-and-drop interface, select a data source (choose from 200+ SaaS applications or connect to your own) and configure triggers and events to automate, optimize, and simplify work processes. Test, validate, and deploy the app via any Workgrid channel.

- ✓ **Accelerate digital transformation** efforts and increase digital agility

- ✓ **Eliminate common barriers** to traditional app development, such as talent gaps, resources, etc.

- ✓ **Reduce the costs** for app development

- ✓ **Build** apps and integrations **faster**

- ✓ **Modernize** legacy systems

- ✓ **Increase digital adoption** and the value of existing technology investments

- ✓ **Reduce digital friction** and improve the digital work experience for employees
