# An AI Assistant for your Intranet

The Workgrid AI Assistant offers a cost-effective, multi-channel solution built specifically for intranets.

By seamlessly integrating with popular platforms including Unily, Igloo Software, SharePoint, and CMS-driven intranets such as Drupal, Workgrid empowers employees to streamline tasks and access vital information across all your business apps - right from the intranet.

With Workgrid you can:

- ✓ Promote relevant and contextual information
- ✓ Streamline processes and approvals
- ✓ Automate tasks and workflows
- ✓ Make information and data easier to find
- ✓ Simplify interactions with enterprise systems

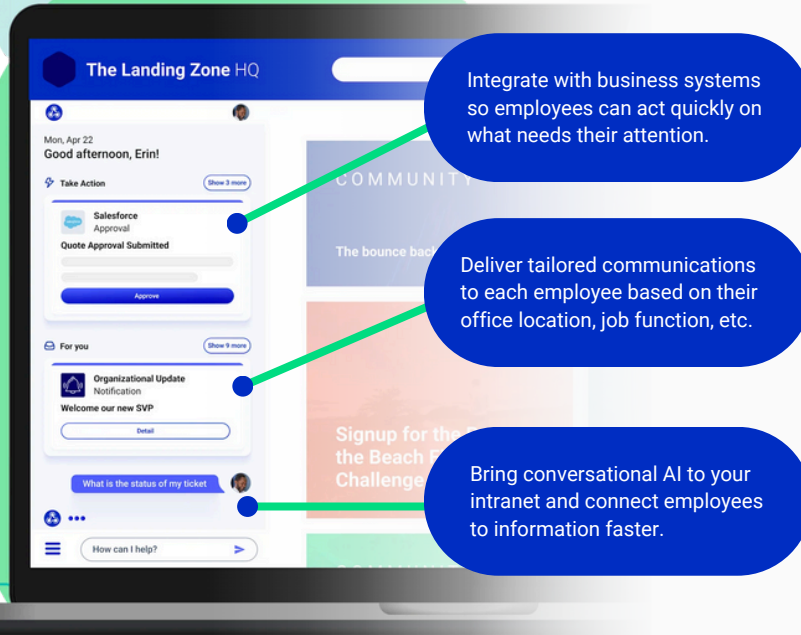

Workgrid

In Action

Leverage a unified AI Assistant that enables employees to find information and automate tasks across business applications, knowledge bases, and documents.

Deliver across the channels your employees already work in:

- ✓ Intranet Web Client
- ✓ Intranet Toolbar
- ✓ Browser Extension
- ✓ Microsoft Teams

Integrate with business systems so employees can act quickly on what needs their attention.

Deliver tailored communications to each employee based on their office location, job function, etc.

Bring conversational AI to your intranet and connect employees to information faster.

An AI-Powered Intranet

Workgrid offers a comprehensive suite of tools designed to manage and support different agents, integrations, and experiences that work across your enterprise to perform everyday tasks.
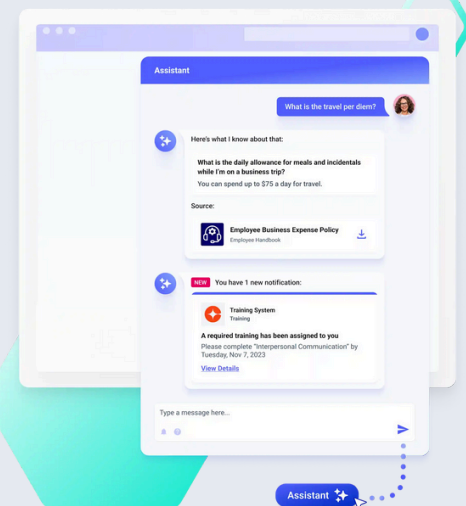

With Workgrid, users can bring together a variety of use cases, from basic apps and workflows to complex AI agents, all in one place on the company intranet.

Seamless integration with the tools your teams already use, including CRMs, HR systems, and more, means Workgrid's AI Assistant for your intranet can deliver value across the workplace without having to manage additional platforms or costly services.

From Intranet to Digital Destination

Pairing an AI Assistant with your existing intranet adds significant value to your digital workplace including the following benefits:

- **Drive active users to your intranet** when you consolidate tasks and system notifications alongside your important communications
- **Keep employees on the intranet** by enabling them to take action on approvals and work processes right from the intranet
- **Simplify finding information** with a conversational experience that surfaces data from company documents, systems, and knowledge bases
- **Harness the power of AI** to anticipate needs and delivery future-ready experiences that unleash a higher level of productivity
